

Needle-free Injection: Acceptance & Preference Study #4 – Q4 2014

Influenza vaccinations were given by healthcare providers as part of their annual immunization campaign by several retailers, a university, a public health organization, and a government agency. Those who administered the injection with the needle-free injector were asked to fill out a survey of their experience.

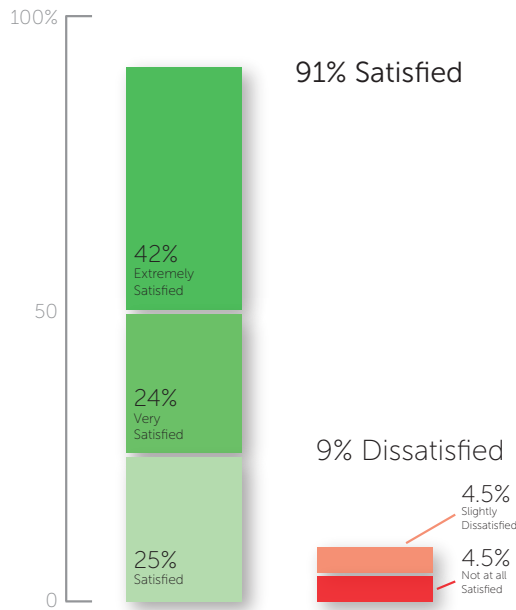

67 participants responded to survey questions. Subjects were overwhelmingly accepting of the PharmaJet *Stratis*® Needle-free injector for delivery of their seasonal flu shots. **Eighty-seven percent (87%) indicated they would like the option of Needle-free shots at their facility for next year's flu vaccinations.**

PharmaJet, Inc. (2014) "61-10194 Post Market Surveillance – HealthCare Providers", internal company report, February 2015.

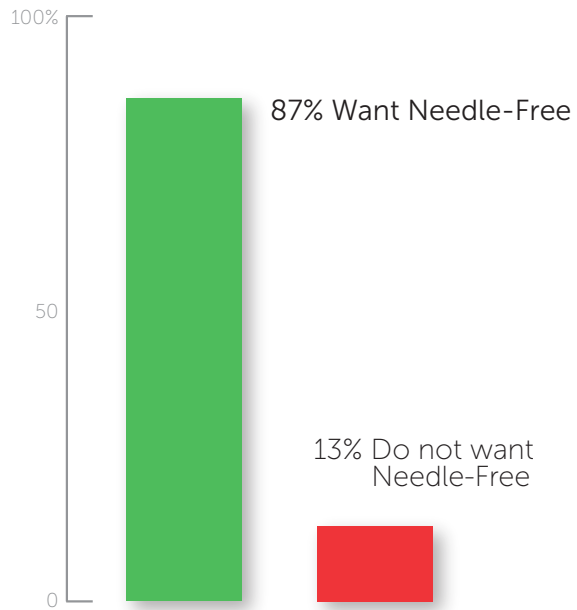

Healthcare Provider Experience with Needle-free Injectors

How satisfied were you with the Ease of Use?

For next year's flu vaccinations, would you like the option of Needle-Free Shots at your facility?

Satisfaction Increases with number of Injections
